Abril Aguilar Lopez

[abril_al@ucla.edu] . [760 975 9330] . [Github: abril-AL] . [LinkedIn: Abril Aguilar-Lopez]

Computer Science student interested in using computer science in interdisciplinary fields and projects. I am able to effectively self-manage in independent projects, as well as collaborate productively in a team. My intrests include computer architecture and low level programming, as well as brain computer interface programs and signal processing.

Skills `programming` `communication` `project management` `version control`

Proficient: Javascript, Node.js, React/React Native, C/C++, Python, Git, HTML&CSS
Familiar: Assembly, Lisp, Bootstrap, MatLab **Databases**: Firebase Realtime Database, MongoDB

Experience

Co-Researcher, University of California, San Diego

2019 – February 2021, Escondido, California

- Worked with a team of co-researches on the UCSD, CREATE project entitles CS-LISTEN, a youth proprietary action research project to investigate the lack of diversity of K-12 computer science education.
- Our research also provided surveyed school with tangible changes to respond to our findings, which are still in use.

Education

Bachelors of Science, University of California, Los Angeles

- Bachelors of Science, Computer Science, May 2025
  - Member of Crux, IEEE, and SWE
  - Selected Coursework: Software Construction, Operating Systems Principles, Data Abstraction, Data Structures and Algorithms, Principles and Practices of Computing

Projects

- BCI Tinder
  - Crux at UCLA, 2022-2023
    - *Implemented a brain computer interface that can detect spikes in attraction based off alpha waves*
    - *Implemented a varietey of techniques to isolate alpha waves, including FFT algorithm and bandpass filters, and multiple preprocessesing filters*
    - *Worked as the leader of my teams programming focused members, was able to take and assign tasks, as well as manage our remote git repository*
    - Technologies used: Open BCI GUI, Open BCI Headset and Cyton Board, `Python` (`neurokit 2.0` and `numpy`), MatLab
- Micromouse
  - IEEE at UCLA, 2022-2023
    - *Aimed to build an autonomous robot witht the ability to solve a 16x16 maze*
    - *Used a variety of techniques and disciplines, ie. PID algorithms, maze solving algorithms, and electrical engineering practices*
    - *Allowed me to pick up skills in lower level interactions between software and hardware, as well as creating and organizing board schematics, and working as a team leader*
    - Technologies used: `Eagle` , `STM Cube IDE` , `C/C++` , variety of parts for creating the mouse PCB board
- Substance Tracker App
  - UCLA, 2022-2023
    - *Built an ios app for users to track and view substance use, data is stored and accessed on a remote database, requiring user authentification*
    - *Worked in a team setting and efficiently create and assigned front end and back end specfic tasks. We also make use of version control with git for development concurrency*
    - Technologies Used: `JavaScript` , `Node.js` , `React` , `React Native` , `Firebase` , `Expo Client` , `Git` , `GitHub`

Awards & Recognition

- National Center for Women & Information Technology
  - Winner AIC National Honorable Mention 2019
  - Winner AIC Regional Award 2020
